Portfolio: harshit.dev

Computer Science Undergraduate | Full-Stack Developer | AI/ML Enthusiast | Competitive Programmer

Education

DIT University, Dehradun

April 2023 – Present

B.Tech in Computer Science & Engineering (Full Stack and DevOps Specialization)

- CGPA: 8.35/10.0

Technical Skills

Languages: C/C++, Python, JavaScript/TypeScript, SQL, Bash

Frontend: React.js, Next.js, Tailwind CSS, Redux, HTML/CSS, Framer Motion

Backend: Node.js, Express.js, REST APIs, GraphQL, WebSockets, Redis

Databases & AI/ML: MongoDB, PostgreSQL, Pinecone (Vector DB), Google Gemini API, RAG, Roboflow

Cloud & DevOps: Docker, AWS (EC2, S3), Vercel, Render, Nginx, Linux

Tools & Testing: Git/GitHub, Postman, Jest, Webpack, ESLint, Socket.io, Pandas

Soft Skills: Problem Solving, Leadership, Team Collaboration, Analytical Thinking

Projects

RentSpace – Peer-to-Peer Community Rental Marketplace

- Built a full-stack MERN rental marketplace where users can list, browse, and rent items (cameras, bikes, tools, etc.) with real-time chat, typing indicators, and in-app notifications powered by Socket.io.
- Engineered a complete rental request lifecycle (pending → accepted → completed) with date-based conflict detection, and implemented JWT access/refresh token rotation with httpOnly cookies and Google OAuth 2.0 for secure authentication.
- Integrated Cloudinary for image storage, TanStack React Query for server-state caching, and Framer Motion for page transitions; deployed frontend on Vercel and backend on Render with full CORS and Helmet hardening.

Tech Stack: *React.js, Node.js, Express.js, MongoDB, Socket.io, JWT, Cloudinary, Tailwind CSS*

NexusBoard – Real-Time Collaborative Whiteboard & Video Platform

- Built a production-grade MERN collaborative whiteboard supporting freehand drawing with Bézier curves, a segment-aware eraser, per-user undo/redo stacks, PDF import, and real-time cursor sync for multi-user sessions via Socket.io.
- Integrated mesh WebRTC for live video/audio between all participants, alongside a real-time chat panel with typing indicators, granular host-controlled draw permissions, and QR-code room sharing.
- Implemented stateless JWT magic-link authentication (email verification and password reset) with Google OAuth 2.0, HttpOnly cookie sessions, rate limiting, and Helmet security headers; deployed on Vercel (frontend) and Render (backend).

Tech Stack: *React.js, Node.js, Express.js, MongoDB, Socket.io, WebRTC, JWT, Tailwind CSS*

Jarvis Browser Copilot – AI-Powered Chrome Extension

- Built a Manifest V3 Chrome extension supporting 200+ voice commands via the Web Speech API for hands-free browser automation (tab management, navigation, media controls, search), with Chrome TTS for spoken responses.
- Integrated a dual-AI chat panel (Groq Llama 3.3 70B as primary, Gemini 2.0 Flash as fallback) powering page summarization, a *Highlight & Ask* feature for context-aware AI answers on selected text, and a multi-tab research mode that aggregates and summarizes all open tabs.
- Implemented a **Ctrl+Shift+J** command palette with smart autocomplete, site-aware page insights (reading time, topic detection, page-type classification), and a lightweight architecture keeping all page analysis local with zero heavy NLP dependencies.

Tech Stack: *JavaScript, Chrome Extensions API (MV3), Web Speech API, Groq API, Google Gemini API*

Competitive Programming

- **Codeforces:** Rating **984** (max. **1124**, Newbie) – 190 problems solved
- **LeetCode:** Contest Rating **1,652** – Global Rank **144,645** / **850,439** (Top **17.32%**) – 220 problems solved
- **CodeChef:** **2 star** Rating **1470** (highest **1524**) – Global Rank **31,348** – 62 problems solved
- Solved **500+** problems across all platforms (Codeforces, LeetCode, CodeChef, CSES, HackerRank)

Achievements

- **3rd Place – CodeGenEx Hackathon:** Secured 3rd position among competing teams, delivering a fully functional AI-integrated application under a time-constrained competitive environment.
